

Perimeter

Perimeter

- Perimeter is the outer boundary of a surface or *plane figure*.
- It is the distance around such a figure.
- Perimeter is measured in *Lineal measurements*.
- **Lineal** means that a measurement is composed of lines.

Lineal Measurements

- A carpenter would need to know how to measure and calculate the *perimeter* of a room in order to install moldings.

Perimeter of a Square

Formula

- The formula for calculating the perimeter of a square is:
- $P = S + S + S + S$
or
- $P = 4(S)$

Perimeter of a Square

Perimeter of a Square

$$P = 4(S)$$

or

$$P = S + S + S + S$$

Perimeter of a Rectangle

Formula

- The formula for calculating the perimeter of a rectangle is:
- $P = L + L + W + W$
or
- $P = 2(L) + 2(W)$

Perimeter of a Rectangle

Perimeter of a Rectangle

$$P = L + L + W + W$$

or

$$P = 2(L) + 2(W)$$

Perimeter of a Triangle

Formula

- The formula for calculating the perimeter of a triangle is:
- $P = S + S + S$ (Base + Leg + Hypotenuse)

Perimeter of a Triangle

Perimeter of a Triangle

$$P = S + S + S$$

Perimeter

- Perimeter of a square:
 - $P = S + S + S + S$ *or*
 - $P = 4(S)$
- Perimeter of a rectangle:
 - $P = L + L + W + W$ *or*
 - $P = 2(L) + 2(W)$
- Perimeter of a triangle:
 - $P = S + S + S$
