

Volume

Volume

- Volume is the space occupied, especially the measure in cubic units of a three dimensional space of limited extent.
- A carpenter would need to know how to measure and calculate the volume of a solid in order to calculate the amount of concrete that is required.

Volume of a Solid (or prism)

Formula

- The formula for calculating the volume of a solid (prism) is:
- $V = H \times W \times D$

Volume (of a cube)

Volume (of a cube)

$$V = H \times W \times D$$

Measuring Volume

- In construction, volume is measured in cubic inches, cubic feet, and cubic yards.
- A carpenter would need to know how to convert volume from cubic inches to cubic feet to cubic yards.
- Additionally, a carpenter needs to know how to convert between these different units.

Converting Cubic Inches to Cubic Feet

- A cubic foot is one foot high by one foot wide by one foot deep.

$$1' \times 1' \times 1' = 1 \text{ C.F.}$$

- Since there are twelve inches in a foot, then a cubic foot is also twelve inches high by twelve inches wide by twelve inches deep.

$$12'' \times 12'' \times 12'' = 1,728 \text{ C.I.} = 1 \text{ C.F.}$$

Converting Cubic Feet to Cubic Yards

- A yard is equal to three feet (or thirty-six inches).
- A cubic yard is one yard high by one yard wide by one yard deep.

$$1_y \times 1_y \times 1_y = 1 \text{ C.Y.}$$

- Since there are three feet in a yard, then a cubic yard is also three feet high by three feet wide by three feet deep.

$$3' \times 3' \times 3' = 27 \text{ C.F.} = 1 \text{ C.Y.}$$

Conversions

Conversions

- Cubic Inches to Cubic Feet

- $1' \times 1' \times 1' = 1 \text{ Cu. Ft.}$

and

- $1' = 12''$

so

- $\text{Cu. Ft.} = 12'' \times 12'' \times 12'' = 1,728 \text{ Cu. In.}$

therefore

- $\text{C.I.} / 1,728 = \text{C.F.}$

Conversions

- Cubic Feet to Cubic Inches

- $1' \times 1' \times 1' = 1 \text{ Cu. Ft.}$

and

- $1' = 12''$

so

- $\text{Cu. Ft.} = 12'' \times 12'' \times 12'' = 1,728 \text{ Cu. In.}$

therefore

- $\text{Cu. Ft.} \times 1,728 = \text{Cu. In.}$

Conversions

- Cubic Feet to Cubic Yards
 - 1 Yd. x 1 Yd. x 1 Yd. = 1 Cu. Y

and

- 3' = 1 Yd.

SO

- 1 Cu. Yd. = 3' x 3' x 3' = 27 Cu. Ft.

therefore

- C.F. / 27 = C.YD.

Conversions

- Cubic Yards to Cubic Feet
 - 1 Yd. x 1 Yd. x 1 Yd. = 1 Cu.
 - 3' = 1 Yd.

so

- 1 Cu. Yd. = 3' x 3' x 3' = 27 Cu
- therefore*
- Cu. Yd. x 27 = Cu. Ft.
